

About Us...

- FEMA certified in School Crisis Management and carry a LA State Brand Name and GSA Contract.
- We manufacture our own high quality system components which allow us to build a system that is scaled to your present and future needs.
- We are a complete system design center capable of providing design solutions for any need, on an individual basis.

Homeland Safety Systems, Inc. is a commercial level security and electronic corporation. We have designed and installed complete solutions in schools, hospitals, daycares, nursing homes, industrial complexes, jails, oil and gas complexes, apartment complexes, smart homes and many others. Being a state licensed contractor, there is no job we cannot complete.

FREE Risk Management Assessment

Call today to speak with one of our FEMA certified engineers. Assessment includes a complete walk through of your facility to determine overall security and to discuss your particular wants and needs.

COMMERCIAL AND INDUSTRIAL ELECTRONICS

FACILITY ACCESS CONTROL

Facility access control systems have become a very popular tool in controlling multi-tenant complexes, high rise buildings, government buildings, or any commercial business from unauthorized access. Professionally designed systems give you the ability to track, record, and deter access throughout your organization and restrict access to sensitive areas.

SECURITY SYSTEMS

Honeywell Security Systems provide a graphic user interface with a LCD touch screen. Arming, disarming, and open/close reports are completed by a press of the button and displayed on the easy to read LCD display. We offer several security systems that can be tailored to meet your specific requirements for protecting your investment.

VEHICULAR GATE SYSTEMS

The Ramset series of slide gate operators are designed for high traffic installations, such as, residential gated communities, public storage, industrial parks and government facilities. We install, service and design systems with full UL 325 compliance.

EMERGENCY MANAGEMENT

Our Emergency Management System is designed to provide quick reference of your facility in the event of an emergency situation. First responders are able to quickly access a floor plan of your facility, showing camera locations, which alert emergency crews of activity in their view. When movement is detected the camera locations will flash, providing an alert of possible unauthorized access to the facility and allowing quick access to individual camera views.

CAMERA SOLUTIONS

We specialize in digital remote viewing camera systems with Internet connectivity throughout the world. Surveillance systems are customized based on our client's application, to ensure a complete cost efficient solution for their project. We design and manufacture our equipment, which gives us the unique knowledge of the proper equipment for each client's need.

Vandal-Proof Cameras:

Our varifocal Vandal-Proof Cameras are designed to prevent damage from hanging on, prying against, or being struck with an object. The camera element is protected by secondary lensing, preventing damage from direct strikes with foreign objects. Signal and power cables are routed through the base, preventing these lines from being cut in an attempt to disable the camera.

HSS-T9302-B: Standard Definition model with 1280x960 resolution

HSS-T9302-SDI: High Definition model with 1920x1080 resolution

HSS-T9302-IP: Internet Protocol model with up to 2550x1950 resolution

Pan-Tilt-Zoom Cameras:

Pan-Tilt-Zoom cameras are designed to be moved from a remote location. These cameras can be moved with software from the HSS monitoring program or with a joystick controller. They have the ability to move left-right, up-down, and zoom in and out to focus on objects, fixed or moving. Versatile mounting options - wall, corner or pendulum.

-We also carry License Plate Cameras, Long Range Cameras, Covert/Hidden Cameras-

CENTRAL MONITORING

The HSS-CMSSystems allows users to view multiple HVR/TVR in one central location. It is capable of viewing 500 HVR/TVR with a maximum of 800 channels. Features include real time audio monitoring, I/O control, PTZ control, connection lost detections, auto login, event log, and playback, all from one central location.

DESIGN AND PLANNING

Our world class applications and installation expertise can simplify the entire construction process, from system design to installation and beyond. Our commitment to your project does not end when your project is complete. Our continued service and upgrade process strives to make your property safer, more secure, comfortable and efficient, for the life-cycle of your building.

INFRASTRUCTURE WIRING

Data applications are becoming more popular in the everyday business world. As technology grows, having the proper network infrastructure to accommodate the needs for future applications is very important. We can design, install and service all of your wiring infrastructure.

BUSINESS COMMUNICATIONS

In today's fast paced world, every business needs a state of the art communication system to stay competitive with the evolving markets. We offer turn-key solutions for phone systems, voice mail, paging, background music and remote data applications that will not only meet your immediate needs, but will allow for future expansion and integration.
